

AgriTech & Food Security

AI & IoT-Powered Smart Farming

AgriTech & Food Security is an AI and IoT-powered smart farming solution designed to support farmers with intelligent, sustainable, and data-driven agricultural practices.

Key Features

-  Crop Health Monitoring – Analyze crop and leaf conditions using AI.
-  Crop Disease Detection – Identify possible crop diseases from images.
-  Smart Irrigation – Monitor water needs and support efficient irrigation.
-  Soil & Crop Monitoring – Track soil and crop conditions.
-  Yield Prediction – Use agricultural data to estimate crop yield.
-  Agri-Finance & Risk Assessment – Support farmers in understanding financial risks.
-  Equipment Sharing – Connect farmers for sharing or renting agricultural machinery.
-  Supply Chain Support – Connect farmers with buyers, suppliers, and agricultural markets.
-  Livestock Monitoring – Support monitoring of livestock conditions.
-  Climate-Resilient Farming – Provide insights for changing weather and climate conditions.
-  App Security – Protect farmer and project data through secure application practices.
-  Local Language Support – Provide information through simple local-language and voice-based communication.

Goal

To empower farmers with accessible AI, IoT, and digital technologies that improve crop management, reduce agricultural risks, support sustainable farming, and contribute to food security.

Technologies

AI | Machine Learning | IoT | Mobile Application | Cloud | Data Analytics

Vision

Build a connected and intelligent agricultural ecosystem where technology helps farmers make better decisions, improve productivity, reduce losses, and build climate-resilient farms.
